Ai-Assistance (Jarvis)

OCT -2025

Jarvis – AI Voice Assistant -Js,Html,CSS,AI

Jarvis is a smart AI assistant built using Gemini AI, designed to make daily tasks effortless and interactive. It can:

- Talk & chat with users naturally
- Open applications on your device using voice commands
- Provide real-time information like current date, time, or news
- Fetch knowledge from Wikipedia and AI-powered sources instantly

Built with a focus on voice interactivity, automation, and AI integration, Jarvis demonstrates how modern AI can streamline tasks and assist.

INTERNSHIP

Fullstack Developer

Jan-April-2026

AR Swift - Fasilabad

- Developed responsive web applications using Next.js and Framer, enhancing user experience and functionality.
- Collaborated with cross-functional teams to design, develop, and implement full-stack solutions following Agile methodologies.
- Implemented RESTful APIs and integrated third-party services to streamline backend operations.
